

If you are considering using Network communication for administration of Knox MedVault, this guide provides the background information necessary to help configure the unit(s) to match the needs of your department. All Knox MedVault units are custom-configured and built-to-order.

Knox MedVault® Large Capacity

Knox MedVault® Smaller Capacity

**Available in two sizes to meet
different space and storage needs**

Information for agency's IT department

- Knox WiFi conforms to the 802.11 b/g/n standard
- Knox Ethernet conforms to the 802.3 standard

Security suites Knox uses in its WiFi

- WEP – Wired Equivalency Protocol
- WPA – WiFi Protected Access
- WPA2 – WiFi Protected Access successor

Encryptions types compatible with Knox WiFi

- Open Authentication
- TKIP Protocol
- AES – CCMP Protocol

Information on your network needed for successful ordering and implementation

To properly order and install the Knox Network software on your network, your network administrator will need to know the answers to the following questions.

- Do you use static IP addresses on your network?
- What Operating System (OS) are you using? Which version?
- What encryption do you use on your wireless network?
- Will you be using WiFi or Ethernet?
- If using WiFi, what is your SSID?
- If using WiFi, do you know pass phrase?
- Will your MedVault be connected to a routable subnet on your network?
